

Introduction

This product provides a seamless integration between Thoroughbred Windows *Basic* 8.4.2 and TS Network DataServer™ (NT). The Thoroughbred Environment™ (Thoroughbred *Basic*™ and *Dictionary-IV*™) and your development environment (IDOL-IV or OPEN*workshop*™) is installed on the server. Each workstation needs only a font, desktop icon for running Thoroughbred *Basic*™, and an **ini** file.

Thoroughbred *Basic*™ will not start unless the workstation is connected to an NT server. The **DEV** definition in the **IPL** file does not change.

During installation the NT server is designated as **PARENT** in the **SERVER.MAP** file. (Note: PARENT must appear in uppercase letters.)

For example: **S1:host-name:optional-port-number:PARENT**

The installation will furnish the host-name and optional-port-number.

All workstations use the server's Serial Number as the SSN. Only the server needs to be activated. The workstations do not require an activation.

Windows Network Basic Quick Start NT

Installation

Server

Install the Thoroughbred Environment™ and Development Environment (IDOL-IV and Dictionary-IV™) on the server. See the appropriate installation guide for more details.

Before starting:

1. If your NT server does not do Autoplay (Autorun) execute **launch.exe** on the CD-ROM root directory.
2. During the installation, you will be prompted for a Serial Number and a Module Code. Both numbers are included in your installation package.
3. If TS Network DataServer™ (NT) has been previously installed STOP the Thoroughbred Server Manager using the NT Service Manager before starting the install.

SETUP does the following:

1. Installs NT server, creates a service, and updates the system path. When prompted it is recommended that you select a **Typical Installation**.
2. Installs Thoroughbred Environment™ and Development Environment (IDOL-IV or OPENworkshop™).
3. Updates the **SERVER.MAP** file on the server with the **NT-host-name**.
4. Creates an INSTALL directory where Thoroughbred *Basic*™ is installed (the default path is **\tbsc\install**).

Client

The client installation requires a **MAP** drive to the NT system. Execute **SETUP** found in the INSTALL directory (see above). SETUP does the following:

1. Installs **tbred.font**.
2. Creates **tsiconst.ini** in the Windows directory.
3. Creates a desktop shortcut to start Thoroughbred *Basic*™.

Client installation for the VIP4 workstation does not change and still requires the CD-ROM.

See reverse for an introduction to Windows Network *Basic*.
