CD-ROM Installation

Version 8.40

Thoroughbred's CD-ROM installation replaces the need for multiple pieces of media. Your CD-ROM may include multiple products for multiple platforms.

Windows installation are accomplished by running **SETUP**. If the CD-ROM contains multiple products or platforms, run **SETUP** from a product platform folder.

UNIX installations are accomplished using `cpio`. Before using `cpio` with a CD-ROM drive, the drive must be mounted. Sample mount commands are as follows:

SCO:	<code>mount -r -f HS,lower /dev/device-name /mountpoint</code>
AIX:	<code>mount -r -v cdrfs /dev/device-name /mountpoint</code>
HP:	<code>mount -r -F cdfs /dev/device-name /mountpoint</code>

After mounting the CD-ROM drive, continue with the documented steps from the Thoroughbred Installation Guide. The CD-ROM contains a `cpio` file for each product. The product `cpio` file name should be substituted from the `/dev/device-name`. Be sure to include the *mountpoint*, product platform folder and product file with the `cpio` command. For example, to install IDOL-IV on SCO:

1. login as **super-user**
2. `mount -r -f HS, lower /dev/cd0 /cdrom`
3. `cd` basic home directory
4. `umask 0`
5. `cpio -icvBume </cdrom/sco/idol-iv_cpio`
6. `./install -n`

Step 2, **cd0** is the name of the CD device. In steps 2 and 5, **cdrom** is the *mountpoint* name.

CD-ROM installations also include a **HelpDocs** folder. This folder contains Window Help files for Thoroughbred manuals.
