OpenVMS

CD-ROM Installation

Thoroughbred's CD-ROM installation replaces the need for multiple pieces of media.

Thoroughbred VMS installations use Digital's **VMSINSTAL.COM** procedure.

Solution-IV installations use Digital's **BACKUP** procedure.

Please note that the executable image name has changed from prior versions. The new executable is named **tbred84.exe**. The **DCL** verb has been changed to **TBASIC** instead of **TBRED**. This will make it easier to run a prior image at the same time. Multiple images will share user counts. The default installation directory is changed to **SYS\$SYSDEVICE:[TBRED84]**.

Make sure you have at least 45000 blocks available on the system disk. If after installing on the system disk you move everything to another disk, except the Thoroughbred root directory, your system disk requirement is approximately 8200 blocks. Also verify that you have 1600 global pages and 3 global sections available. Make sure the **SYSTEM** account has a **FILLM** quota of at least 100.

1. Login to VMS as **SYSTEM** manager. This is REQUIRED.
2. Insert the supplied media in your CD-ROM drive.
3. If this is an update, remove the installed image. See **SYS\$SYSTEM:INSTALL.EXE**.
4. If this is an update, rename **TBRED_BASIC:TBRED84.EXE**.
5. Enter the following command:

```
$ @SYS$UPDATE:VMSINSTAL TBRED_BASIC drive-name:[000000]  
(Substitute your CD-ROM drive name for drive-name.)
```

Thoroughbred *Basic* will be loaded on **SYS\$SYSDEVICE:[TBRED84...]** unless you provide a different full path name for the installation.

If you are upgrading an existing level 7 or level 8 *Basic*, and you install in the same directory, you will be given options to delete, save, or update the existing installation.

6. Set the default to **SYS\$SYSDEVICE:[TBRED84]** or the install directory if it is different.

7. Enter the following commands:

```
$ TBINSTALL :=$TBRED_BASIC:INSTALL.EXE
$ TBINSTALL -N
```

8. Enter the command:

```
$ TBASIC
```

9. When prompted for the serial number, enter the number found in your software package. If this is an update, enter your original serial number.
10. If this is a new installation you will be asked if you wish to enter the **Activation Key**. Do this to permanently install the Thoroughbred Environment. If this key is not entered, the product will only run for 30 days.

To obtain an **Activation Key**, call Thoroughbred Software International, Inc. at 800-524-0430 (outside New Jersey) 732-560-1377 (inside New Jersey). Ask for the **Activation Desk**.

Following the activation question, you will be asked to install other products. The minimum installation is the Thoroughbred Environment (Thoroughbred *Basic* and *Dictionary-IV*). If you have any questions, call the Thoroughbred DEC Products Division at 707-632-5293.

11. Do not move Thoroughbred *Basic* to a different disk after a permanent installation. The Application and Utility directories can be moved whenever there are no users in Thoroughbred *Basic*. Do not forget to update the IPLINPUT environment file(s) to reflect the new locations.
12. When the installation is complete, the System Manager should add the following line to `SYS$MANAGER:SYSTARTUP_VMS.COM`:

```
$ @SYS$MANAGER:TBRED_STARTUP.COM
```

This will install Thoroughbred *Basic* when you reboot.

Add the following line to your **IPLINPUT** file:

```
PRM OPENLIB=IDOL-IV,32700
```
